

V3 Controller - Installation Instructions

Porsche (718)

The location of the OEM Suspension controller for the 718 Porsche vehicles is in the front trunk on the driver side behind the carpeting.

Pull back on the cover and carpeting to expose the OEM Suspension Controller.

Without disconnecting the battery, replace the OEM Suspension controller with the DSC Sport controller. It is a direct replacement so remove the OEM controller then remove the connectors, reconnect to the DSC Sport controller then mount in OEM location.

Put back the carpeting and plastic panel and you are ready to go. You can leave a MINI USB Cable plugged into the controller for future tuning and updates so you don't have to remove the carpeting and panel again. Enjoy your Active Suspension ride!
